

# Ajouter plusieurs destinations sur une méthode de livraison

Le module [delivery\\_multi\\_destination](#) permet de rassembler au sein d'une méthode de livraison "mère" plusieurs méthodes de "filles", une par destination possible.

Pour l'utiliser :

- [créez une nouvelle méthode de livraison](#).
- sélectionnez "multiple destinations" puis, dans l'onglet "destinations" ajoutez une à une les méthodes de livraison particulières.

The screenshot shows the configuration interface for a delivery method. At the top, there is a 'Name' field with the placeholder 'e.g. UPS Express'. To the right, there are two status buttons: 'Unpublished On Website' and 'Active'. Below the name field, there is a 'Destination Type' dropdown menu currently set to 'Multiple destinations'. An arrow points to this dropdown. Further down, there are fields for 'Delivery Product' and 'Website'. Below these fields, there are two tabs: 'Description' and 'Destinations'. The 'Destinations' tab is active, showing a table with the following columns: 'Delivery Method', 'Provider', 'Destination Type', 'Visible on current website', and 'Website'. An arrow points to the 'Website' column header. Below the table, there is a link 'Add a line' and three empty rows for adding new destinations.

Delivery Method	Provider	Destination Type	Visible on current website	Website
