

WIP - Désinstaller des modules en masse

S'il est possible nativement d'installer des modules "en masse", ce n'est pas le cas pour les désinstallations. Voici une astuce pour pouvoir le faire :

Attention cela va désinstaller les modules sans vous montrer les modules qui en dépendent et qui seront aussi désinstallé. A utiliser avec précaution !

1. Installer le module `mass_editing` et créer une opération en lot comme ci-dessous.

The screenshot shows the 'Mass Operation (module uninstall)' configuration interface in Odoo. The top navigation bar includes 'Settings', 'Dashboard', 'Users & Companies', 'Translations', 'General Settings', 'Mass Operations', and 'Technical'. The user is logged in as 'Mitchell Admin'. The page title is 'Mass Editing / module uninstall'. There are buttons for 'Create' and 'Action'. A sidebar button 'Remove sidebar button' is visible. The main content area is titled 'module uninstall' and 'Mass Operation (module uninstall)'. It features a table with columns 'Model', 'Module', and 'Message'. Below the table, there are tabs for 'Settings', 'Technical Informations', and 'Security'. A table with columns 'Field', 'Widget Option', and 'Apply domain' is also present, showing a row for 'Status (ir.module.module)'.

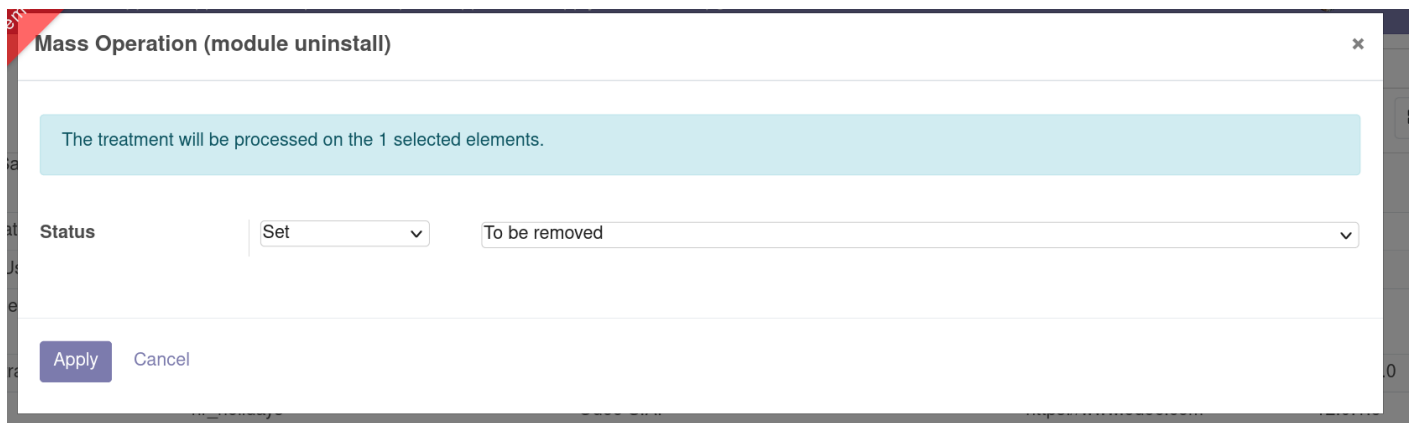

2. Aller dans les applications en vue liste, et sélectionnez les applications à désinstaller.

The screenshot shows the 'Installed' application list in Odoo. The top navigation bar includes 'Settings', 'Dashboard', 'Users & Companies', 'Translations', 'General Settings', 'Mass Operations', and 'Technical'. The user is logged in as 'Mitchell Admin'. The page title is 'Mass Editing / module uninstall'. There are buttons for 'Create' and 'Action'. A sidebar button 'Remove sidebar button' is visible. The main content area is titled 'module uninstall' and 'Mass Operation (module uninstall)'. It features a table with columns 'Model', 'Module', and 'Message'. Below the table, there are tabs for 'Settings', 'Technical Informations', and 'Security'. A table with columns 'Field', 'Widget Option', and 'Apply domain' is also present, showing a row for 'Status (ir.module.module)'. The 'Employee Contracts' module is selected, and a context menu is open, showing options like 'Export', 'Delete', 'Install Modules', and 'Mass Operation (module uninstall)'.

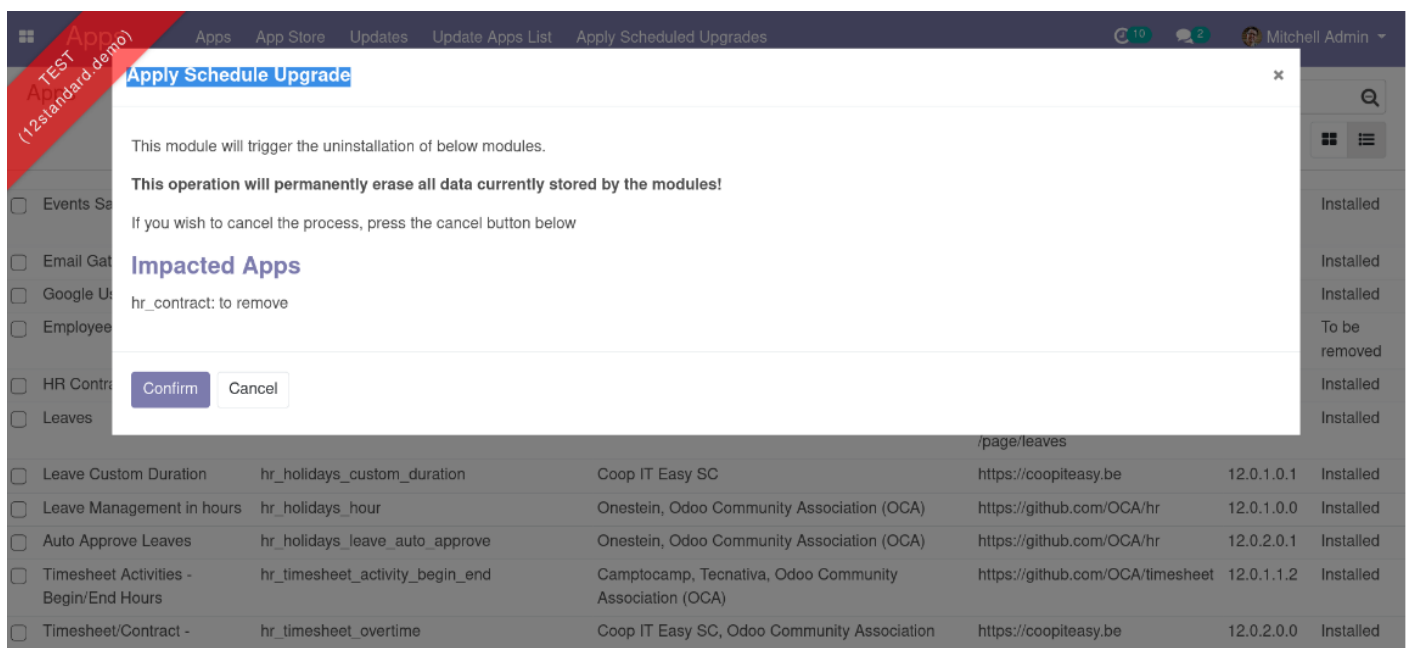

Field	Widget Option	Apply domain
Status (ir.module.module)		<input type="checkbox"/>

Field	Widget Option	Apply domain
Status (ir.module.module)		<input type="checkbox"/>

3. Définir le statut "to be removed", puis sur Apply.

4. Cliquez sur le menu Apply Schedule Upgrade. (note peut-être que cette étape n'est pas nécessaire que l'étape 5 suffit).

5. Attention : cela va désinstaller les modules, mais cela ne vas pas désinstaller les modules qui en dépendent !
